

AEGION®

Stronger. Safer. Infrastructure.®

Insiuform Rioolrenovatietechnieken bv

Insiuform The Netherlands is part of the world leading Insiuform group of trenchless rehabilitation companies. In 1971, Insiuform manufactured and installed the first ever cured-in-place pipe (CIPP) liner in a 900mm x 600mm brick egg sewer located in Hackney and owned by Thames Water.

We manage and control sewer and watermain lining projects on behalf of water and wastewater companies and employ people with long-term experience in the pipeline renovation industry at all levels of our company. We give our clients full traceability through all stages from the manufacture to the installation of Insiuform® CIPP.

We also enjoy access to the engineering and research and development resources of Insiuform Technologies, LLC, a leading provider of proprietary technologies and services for rehabilitating sewer, water, energy and mining pipelines and corrosion protection of industrial pipelines.

For information in Dutch, please visit us at www.insiuform.nl or contact us at the location below:
