

AEGION[®]

Insituform[®]

Stronger. Safer. Infrastructure.[®]

In 1971, Insituform installed the first cured-in-place pipe (CIPP) in the United Kingdom. Since that time, Insituform has installed over 25,000 miles of CIPP globally. CIPP, which is considered the most widely used trenchless pipeline rehabilitation method in the world, is ideal to restore gravity, pressure and potable water pipelines, storm drains and culverts.

Insituform's experience allows us to confidently manage large projects in high-profile and environmentally sensitive areas. We have worked with municipalities, engineering firms and contractors throughout the world to rehabilitate valuable underground infrastructure.
