Stronger. Safer. Infrastructure.®

Insituform Spain

Insituform Technologies Iberica, S. A. is part of the world leading Insituform group of trenchless rehabilitation companies. In 1971, Insituform manufactured and installed the first ever cured-in-place pipe (CIPP) liner in a 900mm x 600mm brick egg sewer located in Hackney and owned by Thames Water.

We manage and control sewer and watermain lining projects on behalf of water and wastewater companies and employ people with long-term experience in the pipeline renovation industry at all levels of our company. We give our clients full traceability through all stages from the manufacture to the installation of Insituform® CIPP.

We enjoy access to the engineering and research and development resources of Insituform Technologies, LLC, a leading provider of proprietary technologies and services for rehabilitating sewer, water, energy and mining pipelines and corrosion protection of industrial pipelines.

For more information, please call us at 1-800-234-2992, visit us at www.insituform.es or contact us at any of the locations below:
