

AEGION®

Stronger. Safer. Infrastructure.®

United Kingdom Locations

In 1971, Insituform manufactured and installed the first ever cured-in-place pipe (CIPP) liner in a 900mm x 600mm brick egg sewer located in Hackney and owned by Thames Water.

We manage and control sewer and watermain lining projects on behalf of water and wastewater companies. We employ people with long-term experience in the pipeline renovation industry at all levels of our company. We give our clients full traceability through all stages from the manufacture to installation of Insituform® CIPP.
